

# Raihan Putro Maulana Rizky

Back End Developer

## PROFILE SUMMARY

Back End Developer with expertise in building scalable applications using TypeScript, Golang, and Java. Experienced in using frameworks such as NestJS, Gin and Spring Boot, as well as leveraging Redis and PostgreSQL to optimize data management and system performance. Focus on developing reliable backend solutions to drive business growth and improve operational efficiency.

## EXPERIENCE

### BACK END DEVELOPER

*Phincon*

Mar 2024 — Present

Jakarta

- Collaborate in feature development discussions with other teams (System Analyst, Product Owner) to define and refine the specifications of various functionalities.
- Developing and maintaining APIs.
- Support the testing process, ranging from SIT, NFT, UAT, PENTEST, to FUT.
- Optimize existing code to be more scalable and easy to maintain as system needs increase.
- Help handle and resolve issues in the production environment to maintain system stability and user satisfaction.

## PROJECTS

### TELKOMSEL DIGITAL WORLD

*Phincon*

Telkomsel Digital World (TDW) is a project that manages the MyTelkomsel application. In this project, I serve as a Web API Developer. As a Web API Developer, my main responsibilities include:

- Participate in feature development discussions with the SSO division to define functionality specifications such as login, profile management, and account binding.
- Collaborate in feature development discussions with the Payments division to define service specifications such as package purchases, top-ups, and bill payments.
- Develop SSO and Payment features based on the specifications provided by the Solution Analyst and Product Owner at Confluence, and ensure completion according to the predetermined story point.

### NOIS

*Phincon*

NOIS (Notification System) is a project designed to handle the User Interface that manages all types of notifications in the Telkomsel environment. In this project, I played the role of Back End Developer. My responsibilities include:

- Participate in discussions on the development of notification features in Telkomsel's environment.
- Develop features based on the specifications provided by the Solution Analyst, as well as ensure completion according to the predetermined story points.
